

Saransh Gupta

Harness Engineer | Software Development Engineer

India | +91 7017025630 | saranshg180@gmail.com | github.com/SaranshG2501 | linkedin.com/in/saransh-gupta

Technical Skills

Languages	Python, JavaScript, TypeScript, SQL, HTML/CSS
AI / ML	RAG Pipelines, Vector Databases, Prompt Engineering, MCP (Model Context Protocol) Servers, TensorFlow, Machine Learning
Frameworks	React.js, Next.js, LangChain, Flask, FastAPI, Firebase
Data & Infra	PostgreSQL (Neon), MySQL, PostGIS, Vercel, Git/GitHub

Experience

Software Intern **May 2026 – Aug 2026**
Inovaantage Systems Private Limited *Hyderabad, India*

- Interned with the core development team, contributing to software design, development, testing, and maintenance activities within the IT department, and gained hands-on experience with production engineering workflows.

Projects

GISMarketplace — Full-Stack GIS Services Marketplace **2026 – Present**
Next.js, TypeScript, PostgreSQL (Neon), Vercel

- Built and deployed a full-stack marketplace connecting RFP buyers with GIS service providers, including a buyer RFP-creation workflow, a provider dashboard, and an admin review panel with AI-assisted provider matching.
- Designed a RAG-based matching pipeline using an LLM (Groq Llama 3.3 70B) to extract required skills from PDF RFP attachments and match them against a dynamic provider skill taxonomy.
- Led an end-to-end production database migration from MySQL to Neon serverless PostgreSQL across 16 tables, adding four new tracking columns and a dedicated table for admin notifications, and rewrote the API layer's query handling accordingly.
- Diagnosed and fixed a critical data-integrity bug in the admin approval workflow; added SQL-level safeguards to make approved matches immutable and migrated file uploads to Vercel Blob for serverless deployment.

GIS Provider Crawler — Companion Microservice **2026 – Present**
Python, FastAPI, Playwright

- Engineered a FastAPI microservice that crawls GIS service providers from two external marketplaces (IndiaMart and Clutch.co) into a shared PostgreSQL database, replacing brittle CSS-selector scraping with resilient page-state JSON extraction and automated crawl triggering with a 15-minute cooldown tied to the marketplace's RFP-approval workflow.

NCERT AI Learning Assistant — MCP & RAG **Mar 2026 – May 2026**
Python, MCP, Claude AI, RAG, Vector Databases

- Created an AI-driven learning assistant enabling students to interact conversationally with NCERT textbook content.
- Implemented RAG-based semantic retrieval over vector embeddings and integrated MCP servers to structure tool-based interactions with external capabilities.
- Produced context-aware, source-grounded responses drawn directly from retrieved educational content.

LifePath — Interactive Decision Simulator **Dec 2024 – Present**
React.js, Firebase, Realtime Systems

- Developed a multiplayer decision-making simulator where users navigate branching real-life scenarios and experience different outcomes based on their choices.
- Enabled real-time synchronization using Firebase for collaborative classroom and multiplayer interactions, with interactive story modes built in React.js.

ChickenPox Detector AI **Feb 2024 – Apr 2024**
TensorFlow, Flask, React.js, Machine Learning

- Delivered an AI-driven healthcare tool for preliminary chickenpox detection, combining ML-based image classification (TensorFlow, Flask backend) with symptom analysis and a React.js interface.

Pranspanda Theatre — Smart Seat Booking System **Mar 2026**
Python, Flask, Booking Systems

- Shipped a web-based seat-booking platform for college events with dynamic seat allocation, admin-controlled seating layouts, and Flask-based reservation workflows.

Education

VIT Bhopal University — B.Tech, Computer Science Engineering *Sept 2023 – May 2027 (Expected)*

Certifications

Generative AI (Google) | Python (Kaggle) | Problem Solving (HackerRank) | MATLAB | Claude/Anthropic Courses
